Education

University Of Toronto Toronto, ON

Bachelor of Science in Computer Science (Co-op) *Sep. 2024 – 2028*

Relevant Coursework: Data Structures & Algorithms, Software Design, Databases, Software Engineering, Linear Algebra I & II, Calculus I & II

Experience

Scotiabank January 2026 – April 2026

Velocity Software Engineer Intern *Toronto*

- Deployed an agentic information search tool using RAG document retrieval with Python, FastAPI, and Microsoft AI Foundry, connecting 5+ information sources and reducing team on-boarding time by 35%
- Developed automated scrapers using Python and Firecrawl to update a Chroma vector database with up to date knowledge from Confluence and SharePoint, ingesting **10k+** documents
- Built AI assisted interactive process maps using React, outlining teams, architecture and information flow
- Created an automated data synchronization pipeline using Spring Boot to integrate an SQL database into a data lineage platform, ingesting over **30k records** daily and saving **240+ hours** annually
- Built a GCP Cloud Function to automate a CSV to BigQuery integration, processing **500k+ user records** daily, replacing a manual data-load process

Intact Financial April 2025 – August 2025

Software Developer Intern *Toronto*

- Built an automated pipeline using Spring Boot and MongoDB to track **10+ metrics** across Jira and GitHub, measuring team efficiency for **200+ developers**
- Reduced API load by **30%** by optimizing GraphQL endpoints and implementing caching
- Implemented event driven interaction using Apache Kafka to stream data between distributed microservices
- Improved service health visibility by **70%** by creating real-time dashboards for CPU health, RAM usage, etc

UTSC Unbenched August 2025 – Present

Head of App and Web Development *Toronto*

- Leading a team of 4 to create and maintain the Unbenched website for all sports at UTSC
- Displaying live game scores and player stats, event information, and articles

Projects

Club Connect | *Python, React, Flask, SQLAlchemy, Tailwind CSS*

- Built an interactive web app using React and Tailwind CSS to allow University of Toronto students to discover clubs tailored to their specific interests
- Implemented backend using Flask and SQLAlchemy to handle relational user data
- Used Python based web scrapers and AI to scrape 1000+ organizations and categorize them
- Developed a custom matchmaking algorithm to calculate club-user compatibility across 8 different metrics

Distributed Async Job Orchestrator | *Java, Spring Boot, PostgreSQL, Docker*

- Created a distributed DAG execution engine using Kahn's algorithm to topologically sort and resolve dependencies
- Implemented automated failure recovery using a heartbeat mechanism that reclaims and re-queues orphaned tasks
- Spring Boot with gRPC communication using PostgreSQL for workflow dependencies and status

AI Finance Manager | *Java, Spring Boot, React, MySQL, AWS*

- Used a React front-end with Spring Boot back-end and ran functions serverless using AWS Lambda
- Structured LLM prompts and context to provide personalized financial insights based on real-time economic conditions and user's finances and goals

Technical

Languages: Java, Python, Javascript, C, HTML, CSS, SQL
Frameworks: React, Next.js, Spring Boot, Flask, Django, GraphQL, FastAPI
Tools: Git, REST API, Docker, Kubernetes, AWS, GCP, Firebase, MongoDB, MySQL, Apache Kafka, BigQuery
